In the original article, Fig. 10 was updated, but the caption still referred to the original. The updated caption appears here. We apologize for any inconvenience.

**Figure 10.** Composite map of December–January–February (DJF) precipitation (PP) for the years when the DJF NAO index was lower than 1 standard deviation. Brown indicates that during a negative NAO phase precipitation amounts are lower than usual, while green indicates that precipitation is above average. Yellow circles: records indicating drier conditions during winter; blue circles: records indicating wetter conditions during winter (see Fig. 8c). Base map courtesy of Monica Ionita.
